

Hackathon Problem Statement: "Build the Coding Club Website"

The Coding Club needs a **dynamic and beginner-friendly website** to serve as its official online hub. Your challenge is to design and develop a **fully functional website** that showcases the club, engages visitors, and provides essential information for both new and existing members an example of this would be Wits Developer Society <https://lamp.ms.wits.ac.za/devsoc/>.

The website should include:

- **Homepage:** A welcoming and engaging introduction to the club.
- **About Section:** Information about the club, its mission, activities, and executive team.
- **Events Page:** A section for upcoming events, workshops, and hackathons.
- **Resources & Projects:** Space to showcase member projects, coding resources, or tutorials.
- **Contact & Social Media Links:** Direct links to WhatsApp, Instagram, LinkedIn, GitHub, and TikTok.

Technologies & Flexibility:

The website should be **beginner-friendly**, primarily using **HTML, CSS, and JavaScript**, but participants are free to explore other frameworks or technologies. Bonus points for creative UI/UX, responsiveness, and interactive elements that enhance the user experience.

Can you build the face of the Coding Club?
